Subject: Recycled Content

Insteel Wire Products Company produces welded wire fabric for concrete reinforcement for Van Laan Supply in our manufacturing plants located in Hickman, Kentucky, and Wilmington, Delaware. The wire that is used in the manufacturing process is drawn or rolled from "ROD". The rod is supplied by several different steel producers and utilizes approximately 85% recycled scrap in the melt shop operations. Approximately 35% is post consumer recycled scrap and 50% is post-industrial recycled scrap. Based on residual concentration, up to 15% Pig Iron and/or HBI may be added to dilute the residual concentration for restricted quality applications.

Thank you for your inquiry. Please let me know if you have any questions.
